Software Engineer with 1+ YOE shipping production infrastructure across hundreds of repos at Appian; building full-stack side projects independently, seeking to move toward product-facing engineering roles.

EXPERIENCE

Appian – McLean, VA

Software Engineer II Software Engineer

*September 2026 – Present
October 2025 – September 2026*

- Ship recurring improvements to internal CI/CD tooling and monorepo pipeline config, continuously balancing test reliability, developer experience, and infra cost as core product tradeoffs
- Contributed to a team effort that reduced infra failure rate from 16% to near-zero and eliminated job queue backlogs, through Appian's GitLab migration and CI pipeline refactor on a 250k-commit monorepo
- Relied on to troubleshoot CI/CD issues on the fly, reviewing merge requests and triaging feature requests in real time as sole rotating point of contact for 100+ engineering teams across 4 support channels
- Trusted with org-wide admin access to GitLab/GitHub (branch protection, merge approvals, access control) and full lifecycle ownership of the Jenkins/GitLab runner EC2 fleet — including vulnerability remediation
- Led integration of an internal AI code-review bot into GitLab MR workflows across my team's repos, reducing common MR mistakes and the need for maintainer intervention

Teaching Assistant (Part-Time), University of Virginia – Charlottesville, VA

January 2025 – May 2025

- TA for CS 4640 (Programming Languages for Web Applications), advising ~80 students on their semester-long fullstack web app projects, aligning their system designs with industry best practices
- Graded assignments and provided feedback across multiple project sprints

Systems Engineering Intern, KBR – Chantilly, VA

May 2024 – August 2024

- Owned database-to-deployment layer of a Kubernetes-orchestrated satellite systems testing dashboard, building an Angular frontend to visualize structured test data for engineering review and sales demos

PROJECTS

Amigo – Garmin ConnectIQ Watchface + Companion Web App

amigo-watchface.app

- Built and shipped Amigo, a Garmin ConnectIQ watchface + React/TypeScript companion web app, reaching 200+ downloads in first 2 weeks with zero paid marketing
- Designed the onboarding/account-creation flow around platform constraints, iterating on UX to make account setup possible entirely on-device
- Published a timezone-normalized leaderboard, reconciling user activity across timezones into a unified daily ranking
- Built auth system (alphanumeric code + bcrypt-hashed PIN, rate-limited endpoints) appropriate to the app's low-sensitivity data footprint

Intersections – Full-Stack Daily Word Game

intersections.in

- Architected and built a daily logic puzzle game (Angular/TypeScript frontend, Python/Postgres backend)
- Iterated visual layout designs on Figma before implementing from scratch, no UI framework

SKILLS

Languages: TypeScript, Java, Python, C, PHP

Cloud & Infrastructure: AWS, Terraform

Platform & CI/CD: Jenkins, GitLab CI, Docker, Kubernetes, Datadog, Git, Bash/Shell, ArgoCD

Frameworks, Databases & Tools: React, Angular, Django, PostgreSQL, Figma

EDUCATION

AWS Certified Cloud Practitioner, *July 2026*

University of Virginia – B.A. Computer Science, Minor in Technology Entrepreneurship, *August 2021 – May 2025*

GPA: 3.75 | Dean's List (Fall 2021 – Spring 2025)
