Software engineer bridging infrastructure and product: I keep CI/CD running for 1,000+ Appian developers and ship full-stack apps users actually download.

EXPERIENCE

Software Engineer → Software Engineer II, Appian – McLean, VA *October 2025 – Present*

- Ship CI/CD improvements (pipeline refactor, incremental CI, cloning optimization) to monorepo pipelines run thousands of times daily by 1,000+ engineers, including FedRAMP deployments
- Halved per-job CI cost (\$0.32 → \$0.15) and cut infra failures from 15% to <1% by owning observability for an 8-engineer Kubernetes (AWS EKS) migration (up to 75k jobs/pipeline)
- Brought production Jenkins servers under FedRAMP compliance auditing with zero-disruption patching via an automated AMI factory (Packer, Ansible)
- Cut common MR mistakes across team repos by driving adoption of an AI code-review bot and writing its prompts and rules
- Resolve live issues with engineers across teams, provision infra with Terraform and ArgoCD, merge code, and design access rules as rotating team point of contact and org-wide GitLab admin

Teaching Assistant (Part-Time), University of Virginia – Charlottesville, VA *January 2025 – May 2025*

- TA for CS 4640 (Programming Languages for Web Applications), advising ~80 students on their semester-long full-stack web app projects from design to production

Systems Engineering Intern, KBR – Chantilly, VA *May 2024 – August 2024*

- Built an Angular dashboard for satellite systems testing, used in engineering review and sales demos

PROJECTS

Amigo – Garmin ConnectIQ Watchface + Companion Web App amigo-watchface.app

- Shipped Amigo, a Garmin ConnectIQ watchface + React/TypeScript companion web app, reaching 250+ downloads with zero marketing
- Designed the onboarding/account-creation flow around platform constraints, iterating on UX to make account setup possible entirely on-device
- Implemented a timezone-normalized leaderboard and auth system (alphanumeric code + bcrypt-hashed PIN, rate-limited endpoints)

ML Font Discovery Tool

- Building a tool that recommends fonts for a brand from a plain-English description (e.g., "friendly, modern bakery")
- Reliably predicted 21 of 37 font style traits (playful, formal, elegant) from letter shapes using ML models (Python, scikit-learn)
- Assembled the training data by matching a published research dataset of human style ratings against a 1,100+ font library

Intersections – Full-Stack Daily Game intersections.in

- Designed (Figma) and built a daily logic puzzle game (Angular/TypeScript, Python/Postgres, no UI framework); developing a Wikidata knowledge-graph puzzle generator

SKILLS

Languages: TypeScript, Java, Python

Cloud & Infrastructure: AWS, Terraform, Packer, Ansible

Platform & CI/CD: Jenkins, GitLab CI, Kubernetes, Datadog, Git, Bash/Shell, ArgoCD

Frameworks, Databases & Tools: React, Angular, Django, PostgreSQL, Figma

EDUCATION

AWS Certified Cloud Practitioner, *July 2026*

University of Virginia – B.A. Computer Science, Minor in Technology Entrepreneurship, *August 2021 – May 2025*

GPA: 3.75 | Graduated with Distinction, Dean's List (Fall 2021 – Spring 2025)
